

Digital transformation and emerging technologies in the public sector

This seminar explores how public sector organisations are reshaping their structures, processes, and capabilities in response to digital transformation and the rise of emerging technologies such as AI and data-driven systems. The session will address key challenges, opportunities, and strategic choices for public administrations as they navigate technological change, with a focus on organisational capabilities, leadership, and the evolving role of public managers.

Date and time:

Tuesday, 9 December
16:30–18:30

Speaker:

Prof. Davide Giacomini

Associate Professor of Business Organization at the University of Brescia, Italy. His research focuses on organisational change, digital transformation, inter-organizational networks, people management, and sustainability in the public sector.
